

Banco de dados:

Modelo conceitual:

Modelo lógico:

Script do banco de dados:

```
CREATE TABLE usuario (
    id_usuario int AUTO_INCREMENT PRIMARY KEY,
    nome_usuario varchar(100) not null,
    email_usuario varchar(255) not null
);
```

```
CREATE TABLE tarefa (
    id_tarefa int AUTO_INCREMENT PRIMARY KEY,
    descricao varchar(255) not null,
    nome varchar(255) not null,
    prioridade ENUM('Baixa','Média','Alta') not null,
    dataCadastro date not null,
```

```
status ENUM('a fazer','fazendo','pronto') not null DEFAULT 'a fazer',
fk_id_usuario int,
foreign key (fk_id_usuario) references usuario(id_usuario)
);
```

Caso de Uso:
